

## Architecture Design Environment

# ADE

The Architecture Design Environment (ADE) tool is used to create and maintain a core system architecture structure which is in turn used for such tasks as the creation and maintenance of netViz diagrams and horseblankets.

- Functions in accordance with applicable Department of Defense (DoD) and Department of the Army (DA) directives, regulations, and policies
- Easily add; new units, platforms, equipment, networks, and systems
- View diagrams and links as well as up to date All Systems and Quantities reports (ASQ) and 'Off Page Links'
- Users can choose any database to view an architecture
- Provides search capability
- Tabs are provided for viewing Diagrams, Details, Equipment Listings, and Links
- Allows users to synchronize database changes
- Version updates are automatically detected, downloaded and installed

- Future Enhancements  
Include: Move to web based tool
