

Online System Architecture Change Proposal

OSACP

The Online System Architecture Change Proposal (Online SACP) web application uses Microsoft .NET technology and a portal framework to deliver a fast and secure location for all System Architecture Configuration needs.

- Get the latest SACPs that are incomplete or available for review in an easy to read 'dashboard' for quick overview
- View existing SACPs
- Review SACPs
- Create SACPs
- Provides help at every step of the way
- Email notifications
- Process is broken down into steps using finish-to-start workflow to ensure a thorough capture of data. Each step must be completed to move on to the next
- Online SACP remembers and loads the last step entered on incomplete SACPs
- Future enhancements will include management reports, historical data, 2028 generation and support for virtual CMB
